

**INCIDENT MANAGEMENT SITUATION REPORT
SUNDAY JUNE 13, 2004 – 0800 MDT
NATIONAL PREPAREDNESS LEVEL 1**

CURRENT SITUATION:

Initial attack activity was light nationally with 68 fires reported. One new large fire was reported in the Southwest Area. Very high to extreme fire indices were reported in Alaska, Arizona, California, Colorado, Kansas, Nevada, New Mexico, Oklahoma, Texas, Utah and Wyoming.

SOUTHWEST AREA LARGE FIRES:

THREE FORKS, Apache-Sitgreaves National Forest. A Type 2 Incident Management Team (Kvale) is assigned. This fire is 11 miles west of Alpine, AZ in ponderosa pine and mixed conifer. Crews continued to construct fireline. Single tree torching produced spot fires one-quarter mile ahead of the main fire. Structure protection remains in place for the community of Nutrioso.

PEPPIN, Lincoln National Forest. This fire is six miles northeast of Capitan, NM in timber. Steep terrain, poor accessibility, heavy fuel loading, prolonged drought and high winds continue to be major concerns. Short crown runs and isolated torching were observed. Crews are continuing burnout operations and working on isolated hot spots. Dozer line is being constructed on the east end of the fire.

KP, Apache-Sitgreaves National Forest. This fire is 20 miles south of Alpine, AZ in brush and mixed conifer. No new information was reported.

SEDGWICK, Cibola National Forest. A Type 2 Incident Management team (Winchester) has been ordered. This fire is 17 miles west of Grants, NM in ponderosa pine. Inaccessible terrain is a major concern. Spotting up to one-half mile ahead of the fire has been reported.

OUTLOOK:

Weather Discussion: High pressure continues to build over most the West for dry and warmer weather. However, a frontal system will bring rain from the Pacific Northwest into Montana.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
SOUTHWEST AREA Mostly sunny and very dry with afternoon breezes.	60s to near 80 mountains. 80s to 90s lower elevations except 100 to 105 lower elevations far south.	3 to 15%.	West to southwest 5 to 15 mph with afternoon gusts to 20 to 25 mph, except south to southwest 10 to 20 mph eastern plains of NM and west TX.
ROCKY MOUNTAIN AREA Breezy with isolated/scattered thunderstorms in the Black Hills South Dakota and eastern plains.	70's and 80's for most of the Rocky Mountain Area. 60's and 70's mountains. 80's and 90's eastern Rocky Mountain Area.	Less than 15% southwest Kansas, southwest Colorado and southern Front Range. Less than 20% in western/eastern Colorado and southeast Wyoming.	West wind 10 to 20mph over most of the Rocky Mountain Area.
SOUTHERN CALIFORNIA AREA Areas of morning low clouds and fog into the coastal valleys, otherwise mostly sunny.	70 to 80 coastal areas. 75 to 90 mountains. 85 to 95 valleys. 85 to 95 upper deserts. 100 to 110 lower deserts.	15 to 30%.	Southwest to northwest 5 to 15 mph.
WESTERN GREAT BASIN Mostly sunny and warmer.	North Valleys: 80s South Valleys: 90s Mountains: 70s to low 80s	North: 15 to 25%. South: 8 to 15%. Mountains: 20 to 30%.	North: west 10 to 15 mph South: southwest to west 5 to 10 mph.

BACKFIRING OR BURNOUT OPERATIONS

Backfiring or burnout operations are often critical operations in the fire management job. If planned and executed correctly, they can speed control of a fire and greatly reduce suppression costs. Conversely, if done incorrectly, they can endanger personnel, extend control time and increase cost. Safety considerations must always be given first priority. No backfiring or burnout action, regardless of strategic importance or other critical factors, is worth risking one human life!

- Backfiring or burnout operations must not jeopardize the safety of personnel or equipment or compromise suppression actions on adjacent portions of the fireline.
- One qualified individual must be responsible for controlling and directing the firing operation.
- Before beginning backfiring or burnout operations, assure that:
 - Lookouts are posted.
 - Communications are established with both firing and holding teams.
 - Escape routes and safety zones are established, known to all resources, and will not be compromised by the firing operations.
- If it is necessary, and time allows, concentrations of fuel adjacent to and inside the control line should be removed.
- Fuel outside the control line may be removed; concentrations of fuel may be scattered, covered with foam or wet down, or treated by ground or aerial retardant applications.
- Critical points such as hooks in the fireline, saddles or canyon may require extra holding forces.
